

## Recovery card (HW solution) vs. Software solutions

<b>Software solutions</b>	<b>Recovery card(HW solution)</b>
Complex installation configuration and operation	Easy installation, configuration and operation
Heavy consumption of PC resources (20% speed drop, 30%-50% HDD space, etc.)	Consumes only negligible computer resources (2% speed drop, 3% HDD space)
Backup image is exposed to user's misuses, accidents or sabotage	Backup image is secured from misuse, accidents, sabotage or other causes, accessible only to administrator (protected by password)
Protection starts only after Windows boot up	Protection start after BIOS boot (prior to HDD boot up process)
No support for multi boot HDD (more than a single operating systems installed on s single HDD)	Supports multi boot partitions
No protection/recovery for CMOS Setup data	Full Protection for CMOS
Remote operation/control is not possible.	Fully controlled from remote location
